Team Budget Planner

Step-by-Step:

- Open a visual-studio code Editor an html file.
- Create a file with the name index.html and add the initial HTML5 bolilerplate code to it.
- Create style.css file for styling html elements and by using link tag in head section the css file is linked to the html code.
- In html file first we create a budget set for expenses it is a budget for the team to use for expenses.
- After set budget then it display expenses title and expense amount to the team. Add there expenses in the add expense box first expenses title and expenses amout. Then click on add expenses button.
- It add the expenses in the expense box. The expense in the box is add the amount from the add expense box given by the team. Then show the balance amount from the budget in balance. The balance shown budget minus expense amount in a balance.
- If we add another expense in the expense box. It add the exist expense and shown in expenses. The balance is minus the expense from the balance amount minus expense it show the budget balance amout.
- If allotted budget amount become zero means we cannot add expenses any more in the expense box.
- The budget set, total expenses calculation and balance budget calculation are done with the help of java script.
- The javascript is make the program more usefully.
- If the value is not valid means we cannot add expenses in expenses box. It show alert message invalid input.
- If the expense is become more than budget. It shows budget exceeded as an alert message.

Team Budget Planner

- If all valid means javascript process the the steps given in javascript not show alert message for any things.
- This the team budget planning project done by me.
